

GAS PIPE SIZING SEMINAR

**For Code Officials, Plan Checkers, Engineers,
Master Plumbers and Plumbing Design Personnel**

The 2007 California Plumbing Code (Chapter 12) adopted the NFPA 54 specifications for Gas Pipe sizing.

As a result, many things have changed. Many Code officials and plan checkers are experiencing difficulty in checking pipe sizing.

Join us for this important seminar to learn about these changes, and the new sizing methods available as a result of the code changes.

This seminar has been developed specifically for senior inspectors, plan checkers, engineers, master plumbers and plumbing designers.

This seminar is being offered *free of charge*, and will be presented by the senior design engineers from TracPipe, a leading manufacturer of Corrugated Stainless Steel gas piping systems. The sizing methods for all types of gas piping will be discussed, including CSST and black iron.

Each will receive a CD-ROM with sizing information as well as other collateral materials. Each attendee is urged to bring his/her own current plumbing code manual (Chapter 12). A maximum of 100 participants/spots are available, on a first come—first served basis.

When: Wednesday, January 28, 2009
Time: 2:00pm—4:00pm (check in at 1:30pm)
Where: Riverside City Library
2nd Floor Auditorium
3581 Mission Ave (near Mission Inn)
Riverside, CA 92501

Please RSVP No Later Than Thursday, January 22, 2009

If you wish to attend, please RSVP no later than Thursday, January 22nd, via email to the following address, and list the name(s) of attendees, and your organization's name:
